for a rotationally symmetric paraboloid

$$\overline{z} - \overline{z_0} = a((x - x_0)^2 + (y - y_0)^2)$$

you can pick a new set of parameters

to make this linear.

 $(x - x_0)^2 = (x - x_0)(x - x_0)$ 
 $x^2 - 2xx_0 + x_0^2$ 
 $z - 2xx_0 + x_0^2$ 

$$= ax^2 - 2axx_0(+x_0^2) + a(y^2 - 2yy_0 + y_0^2)$$
 $\overline{z} = a(x^2 + y^2) - 2axx_0 - 2ayy_0 + y_0^2 + y_0^2$ 
 $\overline{z} = a(x^2 + y^2) - 2axx_0 - 2ayy_0 + x_0^2 + y_0^2 + z_0^2$ 
 $\overline{z} = a(x^2 + y^2) - 2axx_0 - 2ayy_0 + x_0^2 + y_0^2 + z_0^2$ 
 $\overline{z} = a(x^2 + y^2) - 2axx_0 - 2ayy_0 + x_0^2 + y_0^2 + z_0^2$
